G-Shot 1500
HD time lapse nature cam

Genius has launched G-Shot 1500, a nature cam with a great design that is perfect for taking time lapse shots outdoors or indoors. Nature cam is water resistant, which is ideal for you to record the growth of flowers or plants, use it for research to watch insects, birds or animals in nature, or even use it to record family activities or record baby activities.
The camera has a dual lens for taking standard and macro close up shots of plants. G-Shot 1500 does not use much battery power; you can record up to 18,000 shots depending on the time setting. There are six predetermined time settings and one custom, the shortest time interval is five seconds so you will never miss a treasured moment.
Photos are stored as JPEG images in a single folder for easy playback and viewing as an AVI file, just like playing a movie. So just put G-Shot 1500 nature cam in your garden and watch nature grow, and ask your local sales representative how you can pick one up.
